

TRAIL CATEGORIES

Every adventure is a little different. Whether it's a quick day hike, a thru-hike of the PCT, or a fast and light overnight mission, our trail category is designed to cover the entire range of possibilities. Comfort, quality and performance are a foundational requirement in our trail products, but we strive for more. At SCARPA, we raise the bar even further by hand-crafting our boots utilizing innovative materials and construction techniques, so that you can rest assured that no matter what you have planned, our SCARPA trail products will provide comfort and performance every step of the way.

LIGHT HIKING

When weight savings and agility take priority on the trail, our Light Hiking collection provides the perfect solution without compromising comfort. Multiple options in low and mid-cut models offer support and protection, while still maintaining a light weight and agile feel, ensuring that your day hiking or ultralight fast packing objective will go off without a hitch, no matter what the day has in store.

SPECIAL FEATURES

GORE-TEX® EXTENDED COMFORT FOOTWEAR

Using the more traditional bootie/gasket construction, GORE-TEX® Extended Comfort Technology provides waterproof protection with increased breathability (up to 25% more breathable) compared to the Performance Comfort.

GORE-TEX® PERFORMANCE COMFORT FOOTWEAR

The GORE-TEX® Performance Comfort Technology provides the optimal combination of breathability and waterproof protection, so feet stay dry and comfortable, even in changing conditions, and excels in a wide range of outdoor activities in moderate to cool conditions – from challenging pursuits to everyday use.

VIBRAM®

VIBRAM is the world leader in high performance rubber soles, always produced with three objectives: to guarantee the best performance, provide the maximum level of comfort and to maintain quality over time.

PRESA®

Each PRESA® sole is carefully developed thinking about the context of use of the shoe. The compounds are specifically designed for the outdoor world, for maximum performance in all weather conditions and on all types of terrain without compromising durability.

SUPERGUM RUBBER

Exclusive to SCARPA, the SuperGum rubber compound was developed to provide equal or better slip resistance as compared to other high-friction rubbers but with vastly superior abrasion resistance. It was formulated to deliver high friction performance in both wet and dry conditions, but at the same time offers 3 times the abrasion resistance.

INTERACTIVE KINETIC SYSTEM

Interactive Kinetic System, a sole design that simultaneously increases traction and allows for more shock absorption on the trail. The IKS sole features five concave impact zones that compress and absorb energy as they touch down on the ground, allowing secondary lugs to then come in contact with the trail, further increasing traction.

37.5® TECHNOLOGY BY COCONA

37.5° Technology helps regulate your temperature keeping you close to your core temperature of 99.5° (37.5° Celsius) by using active particles in the material to remove moisture and cool you down. When you're cold those particles retain the body's energy to warm you up.

SOCK-FIT TECHNOLOGY

An innovative technology, exclusive to SCARPA, SOCK-FIT is constructed with the tongue as a single piece of elastic fabric that wraps over the top of the foot, which offers a snug mid-foot fit and additional lateral stability, while at the same time reducing weight and bulk.

ACTIVIMPACT TECHNOLOGY

Sole construction with innovative materials that absorb significant ground impacts and increase shock absorption to help minimize energy use on the trail.

ACTIVFIT SYSTEM

SCARPA has developed a last to specifically suit the intended use of each of our products. ACTIVfit System lasts are slimmer in the mid foot and heel areas to better fit a women's specific foot morphology. This type of fit may also be appropriate for a slim, low volume male foot and conversely a high volume, wider female foot may be better suited to the standard last shape.

SCARPA SUSTAINABILITY

SCARPA ECO PRODUCTS

Our products tread the most wonderful and unspoiled landscapes on earth. We feel we must do our best to preserve these landscapes. "ECO", products made of environment-friendly materials refers to products in which materials and processes are specifically chosen for their environmentally friendly characteristics.

SCARPA MIDSOLES

What is a Midsole?

A midsole is a layer of material between the upper of the shoe or boot and the outsole, which provides impact absorption and ground adaptation. SCARPA uses primarily two materials for midsole construction – EVA and PU.

EVA MIDSOLES: Ethel Vinyl Acetate

EVA is a man-made material that is considered a foam. EVA foam consists of a lightweight, flexible matrix containing thousands of tiny bubbles joined together that hold air. When compressed, these bubbles provide cushioning and shock absorption, making EVA an ideal material for lightweight performance footwear.

Pros: The main advantage of EVA midsole compared to other materials is that it is light. EVA has a low density and is quite lightweight making it ideal for footwear where weight is a factor.

Cons: The drawback to EVA midsoles, is that overtime the tiny bubbles that provide cushioning can lose some air and become compressed. Footwear overtime may lose cushioning and support.

Types of EVA SCARPA Uses:

2D EVA (dual-density), 3D EVA (three densities), EVA-I (injection molded)

PU MIDSOLES: Polyurethane

Polyurethane is an organic polymer that has a denser and firmer structure than EVA. It is typically injected or poured as a liquid into the mold and allowed to cure. The result is a durable, supportive midsole that provides cushioning while resisting compression.

Pros: The main advantage of PU midsoles is its high resiliency and longer life, meaning it does not have the tendency to flatten or compress over time as much as EVA.

Cons: The drawback to PU midsoles is its heavier weight compared to EVA or other lighter foam compounds, which may be a drawback when weight is a factor.

Types of PU SCARPA Uses:

PU Direct Attach, 2D PU (dual density), Light PU
